**Subject:** RE: NANCY/AMY: WECT inquiry/Chemours Company

All,

R4 water enforcement is working on information to provide re: the NC permitting program for responding to the inquiry below.

There might be a simple answer to this question, but why was Chemours permitted to discharge PFOA when DuPont in 2005 agreed to phase the chemical out? I've heard concerns that monthly samples are not frequent enough for PFOA, as the company could discharge more amounts of the chemical for three weeks, then shut down production prior to the sample being taken? Can you speak to why the company is only required to do monthly sampling?

Also, I know you previously said the EPA is investigating Chemours' compliance with a 2009 consent order issued under the TSCA for the production of GenX – are Chemours' permits a part of that investigation? Are there any updates you can provide on the investigation?

Appreciate any help/insight you can provide.

Best,

**Brandon Wissbaum**
